## Memorandum

**From:** Steve Willis  
**To:** Wayne Miller  
**Date:** November 6, 2016  
**Subject:** Site visit to observe well drilling activities at Former Williams AFB Site ST012.

Wayne:

This memo summarizes my visits to Site ST012 conducted on November 5 and 6.

On Saturday November 5 drilling of well LSZ58 began. The well is located in a dirt lot northwest of Site ST012, with entrance on S. Tweet St. The well was drilled to 146-ft. on Saturday. Vadose zone and Cobble Zone cuttings did not exhibit evidence of hydrocarbon impact. According to Kyle Keegan, PID readings generally were less than 2 ppm.

Drilling continued on Sunday November 6. Tiana replaced Kyle as the AMEC field geologist. Drilling was completed to a depth of 231-ft. I did not detect any evidence of impact in any cuttings. The highest PID reading was 8.1 ppm at 205-ft. The PID reading in the deepest interval was 1.4 ppm.

According to Tiana, well LSZ58 will be completed on Monday morning. A second drill rig will arrive on Monday and drilling will start on well LSZ57 and SB19 on the Army facility west of ST012.

Please contact me if you have comments or questions regarding this memo.

Thank you,

A handwritten signature in black ink that reads 'Steve Willis'.
